

METHOD AND SYSTEM FOR FACILITATION OF WIRELESS E-COMMERCE TRANSACTIONS

Abstract of the Disclosure

5 A method for facilitating a wireless transaction includes receiving, by a
transaction management system, a transaction request and a spoken authentication code
from a transaction requester. After authenticating the spoken authentication code, a
transaction code is communicated from the transaction management system to a wireless
communication device. The transaction code is then optically scanned from a visual
10 display of the wireless communication device.
